EPIDERM-A

Redefining Skin & Reinventing the Future

HSPN+ 60 Advanced Brightening & Rejuvenation Formula

Innovative Multi-Active Complex

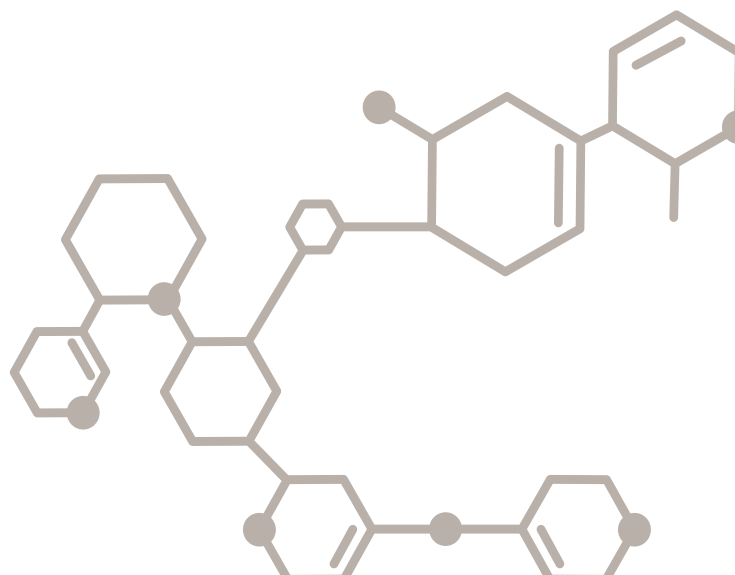

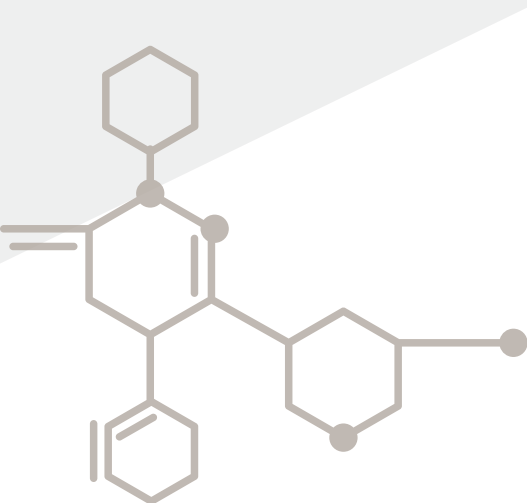

HSPN+ 60 is a cutting-edge brightening cocktail, meticulously formulated with 60 active ingredients to target skin pigmentation, aging signs, and overall skin health. This advanced blend integrates 25 amino acids, 15 vitamins, 5 minerals, 5 coenzymes, 5 nucleic acids, along with Tranexamic Acid, Hyaluronic Acid, Sodium DNA, DMAE, and Glutathione, ensuring comprehensive skin revitalization.

EPIDERM-A

Key Benefits

- ✓ **Brightens & Evens Skin Tone**
Reduces hyperpigmentation by inhibiting melanin synthesis.
- ✓ **Anti-Aging Action**
Helps diminish and prevent fine lines and wrinkles.
- ✓ **Deep Hydration & Nutrition**
Enhances moisture retention and cellular nourishment.
- ✓ **Skin Regeneration & Repair**
Stimulates cell detoxification and renewal.
- ✓ **Antioxidant Protection**
Combats free radical damage, maintaining skin vitality.

EPIDERM-A

Key Active Ingredients & Their Benefits

Unstabilized Hyaluronic Acid (1%)

This potent hydrating agent has an exceptional ability to retain moisture, ensuring deep skin hydration. Beyond its moisture-binding properties, it exhibits anti-inflammatory and regenerative effects, aiding in skin repair and soothing irritation. Additionally, it plays a crucial role in vascular stability, promoting better circulation and reinforcing capillary integrity. As a powerful antioxidant, it helps protect the skin from oxidative stress and environmental damage.

Coenzyme Complex

Essential for cellular metabolism, this complex enhances skin renewal and repair mechanisms. It accelerates metabolic and reconstructive processes, ensuring optimal cellular function and tissue regeneration. With a unique blend of 25 amino acids and related bioactive compounds, it actively supports protein synthesis—particularly collagen production—providing essential building blocks for youthful, resilient skin.

Mineral Complex

This blend of essential minerals plays a vital role in cellular homeostasis, regulating numerous biological functions. It helps maintain the ionic balance within the epidermis and dermis, optimizing cellular communication and nutrient exchange. By enhancing metabolic efficiency, it contributes to healthier, more vibrant skin.

EPIDERM-A

15-Vitamin Complex (A, C, E, I, and B-Complex)

A powerful fusion of essential vitamins that work synergistically to improve skin elasticity, density, and overall balance. These nutrients play a pivotal role in cellular metabolism, collagen synthesis, and microcirculation support. They also reinforce blood vessel walls, providing enhanced skin nourishment. With anti-inflammatory and regenerative properties, this vitamin complex helps reduce hyperpigmentation, promote even skin tone, and strengthen the skin's natural defenses against environmental stressors.

Nucleoside Complex

Acting as a fundamental information carrier, this complex plays a crucial role in protein synthesis and cellular communication. It regulates the precise sequencing of amino acids during protein formation, ensuring the correct structure and functionality of essential proteins like collagen and elastin. This process is vital for skin regeneration, firmness, and resilience.

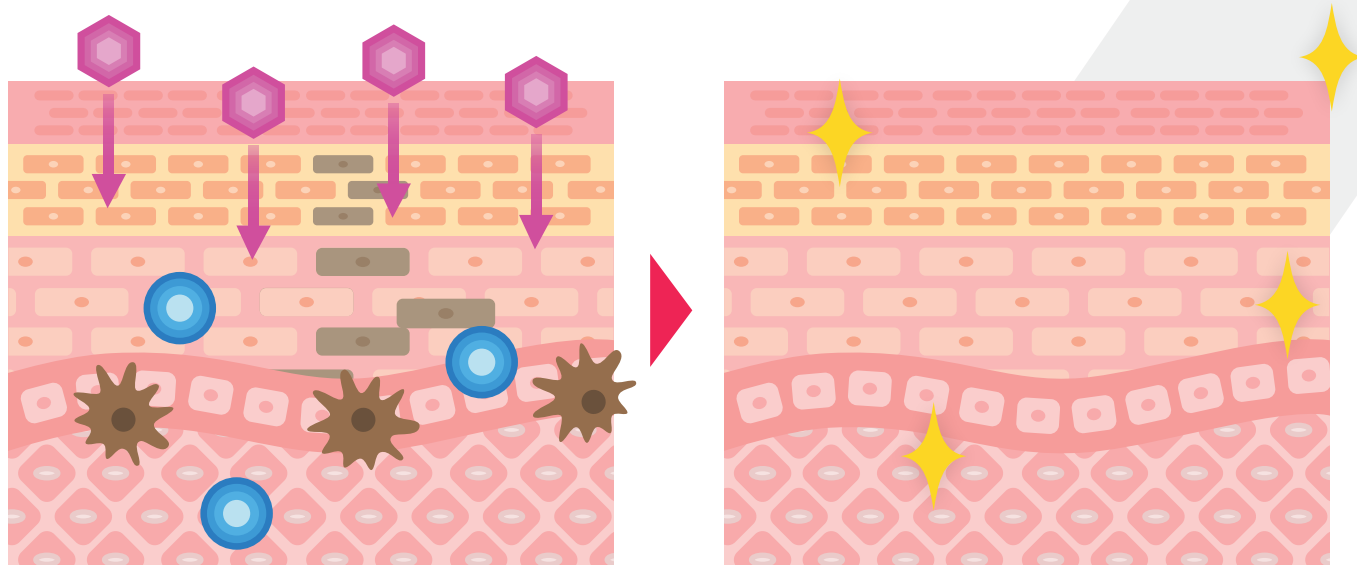

Antioxidant Protection (Vitamin C & Glutathione)

A powerful duo that neutralizes oxidative stress by preventing the harmful effects of free radicals on the skin. Vitamin C enhances collagen production, brightens the complexion, and strengthens the skin barrier, while Glutathione plays a key role in cell detoxification and pigmentation control. Together, they help protect the epidermis and dermis from environmental aggressors, delaying signs of aging and promoting a radiant, healthy-looking skin.

EPIDERM-A

Understanding Skin Pigmentation

Skin discoloration results from melanin synthesis, leading to the formation of melanosomes. When these reach keratinocytes—the predominant cells on the skin’s surface—skin tone darkens. HSPN+ 60 counteracts this process, promoting a luminous, even-toned complexion.

How It Works

HSPN+ 60 is designed to regenerate and protect the skin while improving hyperpigmented areas. By reducing melanogenic factors and limiting melanin production, it effectively illuminates and brightens the complexion. Its potent anti-inflammatory properties also contribute to a healthier, more radiant skin appearance.
